If other computers can access the host but your, it could be a security software running on the host computer. try to start the host and your computer clean booting. This how to may help,

How to run Windows OS with a clean ...With MSCONFIG, you also can configure a clean boot to disable common startup ... To perform a clean boot, please follow these steps: 1) Run MSCONFIG.EXE. ... Sure, the sharing folder is on another host, everyone expect me could access it in our LAN. If I enter "\\10.74.52.11" in the "Run" window, windows will send "TCP-syn" to the 80 port of the host '10.74.52.11', of course, this is unreachable.

"Robert L. (MS-MVP)" wrote:

After re-install the ""File and Printer Sharing for Microsoft Network", have you re-enable sharing on the shared folders? please post back with the result.
