You need a space after the "g" in Ping. The commands are two separate commands:

```
PING 10.0.0.2  
PING 10.0.0.9
```

Run the first one, then after it finishes try the second one.

Just tried pinging from one of the laptops and also from the main computer both came back with the following respectively:

ping10.0.0.2 and 10.0.0.9 is not recognized as an internal or external command operable program or batch file
