In addition to my previous post, these are what I have done so far:

- 1) update the virus definitions.
- 2) run a full system scan. The name and location of the infected files are :

c:\WINDOWS\system\mcireg.dll (Keylogger.Trojan)  
c:\WINDOWS\system\svchost.exe (Bloodhound.Packed)  
c:\Program Files\Outlook Express\oemig54b+.exe (Download.Trojan)  
c:\WINDOWS\svchost.exe (Bloodhound.Packed)

I have quarantined the viruses.

I have also open the Registry Editor and select  
HKEY\_LOCAL\_MACHINE\Software\Microsoft\Windows\CurrentVersion\Run  
to look for the infected files on the right pane, but only 1 infected files was found, that is, svchost.exe.

I did not delete the svchost.exe file.

I have also tried to backup my entire windows XP registry by clicking start – Programs – Accessories – System Tools – and look for the word Backup, but cannot be found. Where could it be?

Kindly assist.
