No they aren't.. You have to go thru all those steps I posted to turn on the security tab.

The helps on using the security tab are written as if the tab is showing by default. When the toggle is OFF by Default, the tab is off also.

And this is just a FWIW. I posted the post to the group because it took 2 days searching help, and online to find how to turn the security tab on. And I don't plan on wasting another 2 days finding out how again, when I can store the answer in my email hints file.
