Ok first of all I hate this wild tangent program. Almost every month there is something new this program downloads into my comp. Some how i get rid of it but things always pop up. Is it ok to remove wild tangent?(which came with the comp). Right now wild tangent runs a background program called Gamedriver.exe and I want to get rid of it.

This brings me to my second question.

How to I prevent programs from starting in startup? I forgot how I now I click Start>Run> and I forgot what to type in. Some one help please and thanks.

My Finally question is if its possible to use system restore to open a file that is corrupted.
