Install Windows 2000 version first. That will install the Windows boot loader. Next, install Windows XP. It will update the boot loader. After installation the boot menu will give you the choice of booting Windows 2000 or XP.

You must not install both operating systems to the same partition.

Check:

: QUERY: coexist win2k & winxp together
:
:
: I want to install Windows 2000 Advanced Server & Windows XP SP2
(streamlined)
: onto my 120GB HD.
:
: I know that if I install Win2k first, then WinXP 2nd, then WinXP
bootloader
: will take over (overtake) Win2k bootloader. If I install WinXP first,
then
: Win2k, then Win2k bootloader will take over (overtake) WinXP
bootloader. Am
: I right?
:
: How can one have both Win2k and WinXP coexist on the same PC? Does
Windows
: automatically create a dual-boot loader menu? Or do I have to resort to
: using LILO or GRUB?
