Is this for your computer at work?

I set my desktop display properties screen resolution to 1034 by 768 as

the

default monitor. Press apply (screen then changes to required size) then
press OK.

When I log on to my computer the next day the screen resolution has
reverted back (really large icons) and multiple monitors rather than

default

monitor.

How can I stop it doing this and keep it set at my chosen resolution?

Thanks in advance.

MW
