Connect both to the router, and then set up a simple home network.. use the Network Wizard for this..

In order to use one monitor, and presumably one mouse and keyboard, you will need to get a KVM switch (Keyboard Video Mouse).. some also share Audio, but they cost more..

My new machine, is due to arrive next week.

I would like to connect it and this present machine together; either via direct wire or thru my Linksys 4 port switch router (wireless).

Object is to be able to reach various files and programs from old machine 'at will' vice moving all data to new machine.
Also would I require another monitor? (hope not)

Have 'no' idea how to do this. Heck, or even if it is possible.

Many thanks for your kind advice.
