So I should get the driver from motherboard or hard disk manufacturer ?  
If from motherboard, will it be on the CD comes with motherboard ?

So is that mean I need a driver of my SATA harddisk into order to install

XP

?

Please read the posts carefully.

Man Utd wrote "I tried to boot from my DVD burner in which I put the XP  
cd.

But I think the cd is not bootable."

I don't know what "Malke" is talking about.  
You already mention that  
you don't have XP bootable CD and he is  
still mentioning the method  
to boot from XP Bootable CD.

With respect, Malke very definately knows her onions.

Re: Setup does not recognize SATA harddrive

You're the one

heading

off track here.

I'm always surprised at "professionals" who STILL have to be asked

"Have

you

checked (event viewer / syslog)".
