Problem: Seagate Hard Drive 80 gb.; and XP is only recognizing 33 gig.  
File system was installed as Fat 32.

The Disk Management tool will not function, to find lost hard drive  
space, which is over 40 Gig.

Question: Am I to assume that the Disk Mangement tool will only  
function when the File table is NTFS?

Gee, I'd actually like to use the 40 gig....I like to use what I pay  
for....

Thanks....

.
