Using Viewsonic VX910 LCD don't have default setting.

"Richard Urban" <[richardurbanREMOVETHIS@xxxxxxxxxxx](mailto:richardurbanREMOVETHIS@xxxxxxxxxxx)> wrote in message <news:uz%23LVow3GHA.1288@xxxxxxxxxxxxxxxxxxxxxxxxxxxx>

Using the "monitor" controls, reset the color settings to default. Then you can start anew to make custom changes.

Richard Urban.

I did a sfc scannow hoping to correct a defrag problem, no help, now my backgrounds on some folders are shades of color, example in a card game maybe the color was green now it two shades of green, horizontal. Cause?.

If you run the LCD monitor in analog mode (most people do), the monitor will self adjust from the bios startup resolution (which is something rather low) to your final desktop resolution. You do not want to prevent this from happening or your desktop image will be messed

Re: auto adjust

up.

Now, if you have your monitor connected to a video card that has digital output, are using a digital cable between the card and the monitor, and the monitor is set for digital operation (it had better be) – none of this will happen. Everything just works as it should, without any adjustments at all (except for color, contrast, brightness etc.).

When I turn on my computer, auto adjust in  
progress comes on the  
screen can  
you please tell me how to turn this off.
