Hi,  
I do have McAfee security suite installed that was provided free from my ISP. I'll check to see if Site Advisor is activated by default. I have disabled E-Mail scanning. Using your computer in the newsgroups you don't get any "Time Outs" when returning from getting coffee or pop?  
Thanks for the help – Yeah, I know you don't use OE.

No, I don't use OE (or Windows) to access newsgroups although Comcast is my ISP and I'm not seeing any problems with my service. If the problem only occurs in newsgroups, are you using the Microsoft news server (and not Comcast's)? The MS news server is [msnews.microsoft.com](http://msnews.microsoft.com).

If the problem continues when using the MS news server, you might want to install another newsreader and see if the slowness is OE-related or more global.

Other Newsreaders for Windows:

<http://www.forteinc.com/main/homepage.php> – Forte

<http://www.mozilla.org> – Thunderbird
