You have to provide a drive letter along with defrag.exe

What you should be scheduling is below:

defrag.exe C:

– Greg/Raxco Software  
Microsoft MVP – Windows File System

Disclaimer: I work for Raxco Software, the maker of PerfectDisk – a commercial defrag utility, as a systems engineer in the support department.

> *I have also done this. I have a 120 GB HD. I have it partitioned into two drives. When I select the defrag ("C:\windows\system32\defrag.exe") all that happens is the defrag window opens up. It doesn't start to defrag. I have to manually. This defeats the purpose of setting a task correct? Any suggestions would be great.*
