Last week I recieved a worm ( spyware) well of corse it caused alot of problems, well it seems I have lost my copy of Windows XP Pro. Well now I cant reformat, and fix my problems. Not only that, when I get a game on cdrom, I load it, and when I go to install it, it says not sutable for running msdos, or windows ect.ect. Is there anyway to possibly get a version of xp just to reformat, and is there anyway to fix my cdrw...by the way its a phillips cdrw 1200 series. thanx..... WOLF
