Hello,

I have noticed recently for some reason that my computer is taking a long while fully load up. It loads to the windows desktop quick;y, but after it gets to the desktop, it sits about 10-15 seconds in a delay before all my starting programs load up (I am running Norton 2004 and Zone alarm pro 5) I am wondering if it is Norton somehow hanging my system like this (it never did before) If you try to do anything before norton or zonealarm loads the computer just freezes. After the 10-15 second delay, the norton icon pops up in the taskbar, then the zonealarm icon. Does anyone have any suggestions on how I can fix this? Is Norton causing the problem??

Thanks for all help!

Dan
