Hope this helps. Let us know.

Wes

In news:582BD1C1-8F65-4994-AFF4-0F3A500C9B13@microsoft.com,

Mikki <Mikki@discussions.microsoft.com> hunted and pecked:

> This is the problem on 2 of my computers.  
> Windows saved your "Computer Name" registry while an application or  
> service was still using the registry during log off. The memory used  
> by the users registry has not been freed. The registry will be  
> unloaded when it is no longer in use.  
> This is often caused by services running as a user account, try  
> configuring the services to run in either the Local Service or  
> Network Service.  
>  
> This is my question::: How do I find out which "service" in the  
> "Services" is causing this ?  
> I've clicked on the link to go to Help & Support, but it does not  
> tell me which particular service is causing this and I Do Not want to  
> start changing all of them, for fear of causing more errors in the  
> Event Viewer.  
> I have changed some services in order to free up some items running  
> at start up, on these computers, because of very slow start ups. I  
> have also followed advice through my readings at the Elder Geek and  
> Black Viper web sites. The advice is great, but it does not say which  
> " log on " is suppose to be used, or the default, unless, I've missed  
> something or I've probably messed up some of these settings along the  
> way. ( I'm great at messing things up ! I'm #1 in my book...lol ) ;-)  
>  
> An example of what I'm trying to resolve would be :::Log on as>>Local  
> system account or this account>>Nt Authority\Local System or should I  
> set everything to " Profile One and Local System Account.  
>  
> Can someone please shed some advice on what the " Log On As " is  
> normally set to in the Services ?  
> Thank You Very Much In Advance
