Windows XP is Alzheimer ...but you can fix this :)

HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Policies\Explorer

add this key:

```
NoSaveSettings
Reg_Dword
0
```

This keep the user settings between sessions.
(1 = don't keep)

- > Anyway the real problem is, when i try
- > to install a bluetooth usb adapter(i have tried 3 different bluetooth
- > devices) it says "system administrator has set policies to prevent this
- > installation" This is driving me crazy because i am the administrator. Is
- > there any way to reset or override system policies? I would just re-install
- > windows but I have too much important stuff to just do that. Please help me??

Check the policies and disable the one that prevent this installation:

Start | Run | gpedit ...

:)
