hi alec

thanks, yes many errors alerts!

starting from the 1st error on reboot to the last they are:

~~~~~  
Timeout (30000 milliseconds) waiting for a transaction response from the Browser service.

~~~~~  
Timeout (30000 milliseconds) waiting for a transaction response from the ShellHWDetection service.

~~~~~  
Timeout (30000 milliseconds) waiting for a transaction response from the Schedule service.

~~~~~  
Timeout (30000 milliseconds) waiting for a transaction response from the ShellHWDetection service.

~~~~~  
Timeout (30000 milliseconds) waiting for a transaction response from the dmserver service.

~~~~~  
Timeout (30000 milliseconds) waiting for a transaction response from the FastUserSwitchingCompatibility service.

~~~~~  
Timeout (30000 milliseconds) waiting for a transaction response from the AudioSrv service.

~~~~~  
Timeout (30000 milliseconds) waiting for a transaction response from the Schedule service.

~~~~~  
Timeout (30000 milliseconds) waiting for a transaction response from the ShellHWDetection service.

~~~~~  
The Computer Browser service terminated with the following error:
This operation returned because the timeout period expired.

no wonder it takes 5mins to load XP. if anyone can shed light on fixing

Re: Windows XP 5 minute Load time

these errors the beers on me.

thanks,
j

i have a new machine that takes forever for windows XP to load after logging
in.

once loaded, the machine works fine. this time delay ocured about 1 week
after having the machine running smoothly with all my applications that
pre-load on boot up...no problems then but now SLOW.

during the slow load, NO strange processes are eating up CPU usage.

if i run a safe mode boot Windows XP loads quick...no surprise there.

can anyone help out or provide a solution to isolating the problem causing
the slow load?

Check the Event Log (Run->eventvwr). Look in the System Event log and I can pretty much
guarantee that there will be one or more
Error events (they are marked by red x-circles), at the start of each boot-up (check the
date/time stamps), with the Source listed
as "Service Control Manager". Double-click those to see which service is hanging, and thus
causing the delay-particularly the first
one of the session (the one nearest the bottom of the latest set).
