Are you using a wired or wireless keyboard and mouse? Batteries?

Open Disk Defragmenter and click on Analyse. Select View Report and click on Save As and Save. Now find VolumeC.txt in your My Documents Folder and post a copy.

How much RAM memory? How large is your drive and how much free space?

Try Ctrl+Alt+Delete to select Task Manager and click the Performance Tab. Under Commit Charge what is the Total, the Limit and the Peak?

Hope this helps.

Dear All,

Sorry that Im not sure did I post on the wrong page.

While I using some applications, the keyboard & mouse will stuck. Sometimes i can recover it if i keep clicking the keyboard keys. Sometimes its does recover until i reboot the computer.

Re: Keyboard & mouse will stuck while using some applications

For example, while I playing World of Warcraft, when I move forward, the key seems stucked and I keep going forward but out of my control (repeating the last action before my keyboard got stucked)

Everythings just fine, but it will happen suddenly without any error msg.

Please help me to fix this problem.

Thanks in advance.

Regards,
Yonnie
