Where exactly are these files and what are they called? As you're so keen to be rid of them, what happens when you simply try to delete them "manually"? (ie by locating them in Windows Explorer, enabling the viewing of hidden files and folders if necessary, and simply deleting them)

Leah wrote:

Thank you Gerry i ran the ccleaner , unfortunately it didn't solve the issue , although it improved my computer performance. For Olorin Yes i do have firewall and anti virus . It still has the same amount remaining everytime as well as a Webclient/Publisher Temp file that has 32 kb in it also remain , but that i don't care about . It is just annoying that all of a sudden it won't delete. ??????

Do you have protection against viruses and other malware? Do you run a firewall?

Leah wrote:

Thank you I will check that ccleaner out. I realize it's not much space being used , and any additional files that get added to it always delete , but there is always 10,950 kb that will always remain.I'm not sure what caused windows explorer to do that.I have dial up internet , and it wasn't connected at the time , and my son clicked the explorer icon, and it keep searching for a connection , i would close the page and 5 more would open , and it just keep going , it took 20 min to get them all closed. now i mainly run firefox for my browser , cause explorer just gives me grief..it

Re: Disc Clean up issue

won't open, and if it does i can't get it to close . So i don't use it unless i absolutely have to. "Gerry" wrote:
