I have a casio qv-r40 digital camera. When I insert the sd memory card into the reader slot, I get the folder DCIM, then open for folder CASIO100, then open that folder to get the tile image (photo). Problem: the image will not show in preview mode or in the windows fax & viewer. If I move the image to my pictures, there is no preview. Can the reader drive be configured to allow preview? Or is this not possible?

Thank you

Robert E.
