=====
Maybe the following steps will be useful:

Open a folder and in the left pane...choose...
My Network Places. Another way to access it
is...View / Go To / My Network Places.

Now, in your My Network Places folder...choose
(from the left pane) Add A Network Place. This
will open your...Add Network Place Wizard. If
you follow the prompts, hopefully you can add
the URL of the Yahoo server to the list.
