You're welcome...and I'm glad you found your fix...I would never have expected that you changed that setting.

Thanks for the update.

John...thanks so much for your help. I found the permanent solution today.  
I right clicked on the PhotoStory3 icon, went to properties and found that somehow I had checked "always open with 640x something"...once I unclicked that everything worked find. I think at some point I was trying to email a PS3 and had saved the project in the 640Xsomething and it just stayed there all this time. I really appreciate your help....PapaJohn said you were the man!
