This printer can only use sRGB.

What is the "Default color profile listed under Manual" and does it match the highlighted one listed for "Automatic"? Maybe this is where the problem is.

With Windows XP color management set to "Automatic" and using Windows XP Photoprinting Wizard, I get prints with brownish/palish flesh tones. If I set Windows XP color management to "Manual" (say sRGB), I get good colors. Any idea why?

Thanks

Further to my post:

When I state "Windows XP color management set to "Automatic" ", I mean: "

Re: Color printing from Windows XP Photoprinting Wizard

Start–Printer&Faxes–HP Officejet–Properties– Color Management – Automatic".

All the necessary color profiles associated with my HP printer (such as sRGB, Adobe RGB1998, etc) are correctly listed in the Color Management screen.

My printer is a HP Officejet G55 xi. The printer driver comes from Windows XP.
