Thanks John. I have already installed TweakPS some time ago and although it improves the basic program in a lot of ways (burn to DVD not being the least of them!!) it doesn't fix this particular bugbear. Still hoping!

=====
I'm not sure what you are talking about because TweakPS has absolutely **nothing** to do with burning DVDs.

And yes...TweakPS **will** remove motion from a PhotoStory WP3 Project file. maybe you have it confused with something else?
