I can print to the local printers from my workstation fine but when I make a connection through terminal services using the built in RDP protocol in XP I can't print to any of my local printers. I have a HP printer connected by USB and a network printer I connected using the printers IP address. Any ideas what's preventing me from printing to my local printers while using Terminal Services? The computer I can't print from is not in the same network as the server, it's located at another office without any VPN to the main office where the server is located (personally I don't think this should be a problem) – if you need any more information about the network let me know.
