

Custom form applies to all printers instead of just 1

Hi,

I have a dot matrix printer, with a custom created form, so that there is no page feed (continuous paper), usually the it prints and leaves an A4's worth of space below the necessary print. – Hence the custom form to stop this. (using server properties in printers)

Recently I sentup a laserjet on the same PC, this stuffed everything up... Either the Laserject uses the same form (printing across 7 pages for a A4 sized doc), or the dotmatrix leaves the A4 page space, waisting 3/4 of the purchased paper.

I have this problem at numorous clients, no solution thus far... Please help

.
