Over the 4/5 years I have been using this printer I have had very few problems.

Suddenly this problem has occurred:

I write a file in Word and then save it.

Before I print it I usually go into Print Preview just to check things out.

This time however it just showed me a blank box and the printer would not print.

I went through Print Troubleshooter doing everything it said no less than 3 times without any success.

I switched off for the night and the next day things had corrected themselves.

Everything was OK for a complete day and then the problem happened again – blank preview and no printing.

This time switching off for 10 minutes and then back on had no effect.

I have been trying most of today to correct things without success.

I even emailed the file to a friend, the file arrived, his Print Preview was blank and he also could not print it.

I then copied it onto a floppy, put the floppy in my friends PC – same result as before, totally no joy!

Can anybody help me?
