It worked! Now I'm trying to add printer, but no luck. Hope you can get me through this last script.

```
cscript prnmngr.vbs -a -p "HP 4240 printer" -m "HP LaserJet 4240 PCL6" -r IP_10.23.23.23
```

```
Unable to add printer HP4240 printer Error 0x80041001 Generic failure
Operation PutInstance
Provider Win32 Provider
Description The printer driver is unknown.
Win32 error code 1797
```

Also got this link to enable delegation

<http://technet2.microsoft.com/WindowsServer/en/Library/72612d01-622c-46b7-ab4a-69955d0687c81033.msp?mf>

But just reading it, it compromises security since it is also for computer account. Is there any other way for remote feature to work?

```
this error is
E:\>winerror 123
123 ERROR_INVALID_NAME <--> 0xc0000033 STATUS_OBJECT_NAME_INVALID
```

remove the \ in the -h parameter \PCL6\" to \PCL6"

I recommend simplifying the driver path.

```
md c:\hp4240
copy the files you want to install into this directory.
```
