Hi there, thanks for looking into my problem

The other day I was installing Windows XP (Can't Remember if it was home or prof. edition) in my Company but failed to do so. The error file generated by the setup read, somewhat as follows. Can you please tell me the problem and the possible solution for that.

With Regards

Jaggi

SETUP: Upgrade=0.

SETUP: Unattended=1.

SETUP: SpSetupLoadParameter was unable to find unattendswitch.

SETUP: SpSetupLoadParameter was unable to find runoobe.

SETUP: SpSetupLoadParameter was unable to find factorymode.

SETUP: SpSetupLoadParameter was unable to find uniqueness.

SETUP: SpSetupLoadParameter was unable to find includecatalog.
