Steve,

You might want to check and see if this applies to your situation:

| After using sysprep once and resealing the machine and  
| then imaging, I had to make a change to group policy  
| dealing with synchronising. Went to reseal and got an error  
| message saying that it could not make changes to the  
| registry due to errors in it, every thing else works OK

microsoft.public.windowsxp.setup\_deployment: RE: Sysprep giving error message accessing registry

| and it checks out for viruses etc OK. When I rebooted it  
| went through the minisetaup but I think it did not create  
| new SID's can someone tell me either a) if new SID's would  
| have been created or b) how to repair the registry (other  
| than a repair install)

| T.I.A
