Hi

Seems as though your browser has been 'hijacked' – try the following programs to delete any spyware that may be on your system:

Ad-Aware – www.lavasoftusa.com

Spybot – <http://www.safer-networking.org/>

CWShredder – <http://www.spywareinfo.com/~merijn/downloads.html>

| I am having probs with setting my homepage... I set my
| homepage to msn then check by clicking on the home button
| and everything is fine, it goes where it is supposed to
| but if I go offline and come back on when the computer
| loads it goes to an annoying page that is not what I
| want - this only started yesterday as my husband was
| goofing around on the computer and I can't get rid of
| this page. I tried resetting my websettings and homepage
| to default and again it is fine until I log off and come
| back on then I am back where I started. I can't let my
| son on the computer because of this... HELP!

Outgoing mail is certified Virus Free.

Checked by AVG anti-virus system (<http://www.grisoft.com>).
