I was running ME with a HD split into 2 partitions C & D. I currently have ME on the "C" and installed XP on the other par which I reformatted, & it is an "F" drive which I am actively using XP. I have done all B/U's to DVD needed. I am showing 14.3G on each par of a 30G HD, a little short no? I want to completeley reformat all 30G of HD and do a new fresh install of XP. Have hit MSKB, but couldn't find this exact situation. Help Please.
