Hi

A knowledge base article has been released:

Changes in behavior of the SysPrep and RIPREP tools after you
install Windows XP Service Pack 2

<http://support.microsoft.com/?id=887816>

To obtain the hotfix mentioned in the link above, as the article states, you need to call Microsoft Product Support Services to obtain it (outside the US, customers should contact their local Microsoft subsidiary.). The support call will be free as long as you refer to the Knowledge Base Article number (887816) and ask for nothing more.

You will need to find the phone number from here:

[http://support.microsoft.com/default.aspx?scid=fh;\[LN\];CNTACTMS](http://support.microsoft.com/default.aspx?scid=fh;[LN];CNTACTMS)

In the wizard, Select WinXP, and Basic, and then "It was purchased separately"

For USA, you end up here

<http://support.microsoft.com/default.aspx?scid=fh;en-us;Prodoffer31>

Use phone number 425-635-3311
