| NOTE: IS THIS THE BEST GROUP FOR HELP ON REPAIR INSTALLS?

| I did a recent repair install on my Satellite 3005-S307 in which it gave me  
| an error message on finding some file called kbfiltr.sys.

| I had a system which was crashing on execution of any second command (IE I  
| could go into Notepad but as soon as I tried to type anything or I could go  
| into Photoshop but as soon as I tried to highlight any file it would  
| crash).

| This was something to do with uninstall of a hotfix prior to putative  
| installation of SP2.

| It has left a system which let me use the keyboard while it was doing the  
| repair install to  
| enter the key and the enter button (to carry on at various stages) but  
| during install reboot crashed on  
| entering the administrator password!! I suspect that they system was  
| actually crashed at that stage as I dont think the cursor would move when I  
| touched the touchpad

| Anyway on reboot it still gives an error message on a file called  
| DRI\_KBfiltr which it says it cannot find. And when I reboot it STILL crashed  
| as soon as I try to use the keyboard. (all I was doing was to try to delete  
| the half to a whole gig swap file on a fullish C drive and put it solely on  
| the D drive, where there seems to have been one anyway). Norton Speedisk was

microsoft.public.windowsxp.setup\_deployment: Re: Repair install leaves system crashing

| running in the background and it still is, (only the mouse cursr is crashed  
| as far as I can see)  
|  
| (I should point out that the WHOLE keyboard doesn't work and crashes the  
| unit as soon as I try to use it as opposed to just the Dritek keys)
