-

Additional information –

The unattended install kicks off just fine....I am using a WinPE boot disk, that runs diskpart and cleans the disk, then creates, and formats out the partition, then calls "x:\unattend\i386\winnt32 /unattend:X:\unattend\winnt.sif /makelocalsource /syspart:c:"

The install kicks off...all the initial GUI mode stuff kicks off, copies files, etc..reboots the the system to the text mode portion...this is where we get the above failure.
