Hello & Good Evening:

I am currently in the midst of working on a friend's computer. She has two teenagers whom also use the computer. Every other month she brings her computer to me for some problem from the kids' downloading. What I want to do is use the Admin Tools to limit their use, block certain websites and types of programs/software they download, block the use of P2P programs, just to name a few.

Can anyone tell me what to do or where to go on the Internet to get information on accomplishing these tasks? Thank You for Any and All Assistance and/or Suggestions. Also, she used a program called "ErrorGuard" which found 722 system errors on her computer. Can you suggest a site or possibly a "free" program I can use temporarily to scan her system and possibly repair it? Again, Thanks for all your Assistance.

Dee
