This question read very similar to my own. However, when searching for my specific problem I havnt seen it mentioned before. Here it goes:

When booting from the CD (DELL XP Reinstallation CD) on a new motherboard, CPU, HDD, etc... I am stoped at the ELUA F8=I Agree screen. I am able to Page up and down and press ESC to exit install...However I am unable to "agree"??

Is this there something I have done wrong? I have purchased a OEM XP version as my Plan B...but would rather use the software I already have?

Please advise.

Thank you in advance
