Hi,

I think you have to obtain a Windows XP boot disk. Check following article:

<http://support.microsoft.com/kb/305595>

<http://support.microsoft.com/kb/310994>

Hope this helps.

Have a good day!

Best regards,

Vincent Xu

Hi !

I use Unattend installation from DOS boot USB device (16 bits)... So I

don't

use winnt32.exe... And I think this is why I received an error message...

I

can reproduce this error message if I copy the MUI directory in my
"i386\%oem%\\$1" directory and manually start the muisetup.exe after all

is

done ...When all is done, If I look in c:\MUIINST directory, all files

and

directory have short file name !!! So I think that setup try to install

MUI

in a 16 bits environment !!!

Any idea !

Hugo

Hi,

First, we'd better make sure the unattend file is correct.

Check the following settings are relevant for an Unattend.txt file when you configure Windows MultiLanguage version-related settings during an unattended installation:

```
[RegionalSettings]
Language = locale ID
LanguageGroup = language group ID, language group ID
SystemLocale = locale ID
UserLocale = locale ID
InputLocale = locale ID:keyboard layout ID, locale
ID:keyboard layout ID
UserLocale_DefaultUser = locale ID
InputLocale_DefaultUser = locale ID:keyboard layout ID
```

The [RegionalSettings] section contains entries for installing regional settings during Setup.

If you include [RegionalSettings] in Unattend.txt, you must also use the /copysource:lang command-line option of Winnt32.exe so that Setup copies the appropriate language files to the hard disk. The command winnt32 /copysource:lang copies all the files in the PRODUCT:\i386\Lang folder

to

```
MASTER:\%WINDIR%\Lang.
```

For a list of valid locales and their language groups, visit the

Microsoft

Global
Software Development Web site at
<http://www.microsoft.com/globaldev/reference/muizone.msp>

Re: Problem installing MUI in an unattend installation

LanguageGroup

Specifies the language group for this installation.

Syntax LanguageGroup = language_group_ID[,
language_group_ID[, ...]]

Values language_group_ID[, language_group_ID[, ...]]

Example LanguageGroup = 2

Comments You cannot specify a particular locale or language unless you install the appropriate language group. In Windows XP, if you install one language group, then you install all corresponding language groups. For example,

if

you install one language group from the set of Far Eastern language groups, then you also install associated language groups. Likewise, if you install one language group from the set of complex script language groups, then you install all complex script language groups.

The supported language group IDs are listed in the following table.

ID Language Group Corresponding Value in Regional and Language Options

Control

Panel

1 Western Europe and United States Installed by Default

2 Central Europe Installed by Default

3 Baltic Installed by Default

4 Greek Installed by Default

5 Cyrillic Installed by Default

6 Turkic Installed by Default

7 Japanese East Asian Language

8 Korean East Asian Language

9 Traditional Chinese East Asian Language

10 Simplified Chinese East Asian Language

11 Thai Complex Script

12 Hebrew Complex Script

13 Arabic Complex Script

Re: Problem installing MUI in an unattend installation

- 14 Vietnamese Complex Script
- 15 Indic Complex Script
- 16 Georgian Complex Script
- 17 Armenian Complex Script

For a list of specific languages that correspond to particular language groups, see the Microsoft Global Software Development Web site at <http://www.microsoft.com/globaldev/>.

For more details, please refer to the following articles:

How To: Specify language and international settings during unattended setup
<http://www.microsoft.com/globaldev/reference/win2k/setup/specify.msp>

325856 HOW TO: Specify Regional and Language Settings for an Unattended
<<http://support.microsoft.com/?id=325856>>

ID: 289125 HOW TO: Create the Regional and Language Settings for an Unattended
<http://support.microsoft.com/default.aspx?scid=kb:en-us:289125>

Windows XP Preinstallation Reference help file located in the Support\Tools\Deploy.cab folder on your Windows XP installation media, topic "Preinstalling the Multilingual User Interface (MUI) Pack". You

can

find very detailed information in Deploy.htm.

Hope this helps.

Hi !

Re: Problem installing MUI in an unattend installation

I have a problem installing MUI (MultiLanguage User Interface) in an unattend installation.

I think I do exactly what specified in readme.txt file that come

with...

But I received this message :

INF Install failure. Reason:
The operation was canceled
by the user.

I search the WEB but found
nothing !!

Any help will be
appreciated !

Hugo
