Hi Cari,

I have a Samsung DVDrom that according to the NeroTool can read dvdram discs. The other is an Nec cd/dvd writer which I have 2. One in this machine and 1 in another which does read the dvdram discs even tho the Nerotool says its not supposed to.

Thanks for the response

You need a DVD drive that specifically reads RAM disks. What DVD optical drives do you have in your PC?

Hello All,

I have a Hitachi DVD Camcorder that formats the dvdram discs to create vro files. I have 1 dvdrom drive and 1 dvd writer. This disc is not able to be read in either drive. Nero toolkit says that the dvdrom is able to do so. Windows explorer does recognize that a disc is in but wont show any files. I'd like to copy them onto the HDD and then use VideoRedo and my authoring software to create a DVD but I have no way to copy this file from the dvd ram disc. I have XP pro and sp2 with all updates asus mobo 2.6 ghz processor 1gig ram. Both of these drives will play back any DVD. Any ideas where to look for this problem?

Thanks
