Hello,

I have a little problem with some laptops and Windows XP SP1.

I'm trying to join a VPN Gateway (a nortel contivity) with L2TP over IPsec.
There is no routing problem, the IPsec tunnel is mounted, but after the L2TP is not mounted because Windows XP send the hostname of the laptop instead of the User ID that I define in the L2TP configuration panel.

in the contivity log I see this :

Session: L2TP[computer.domain.com] attempting login

instead of this :

Session: L2TP[UserID] attempting login

I have the same problem on 3 differents laptops and I don't find any information about how doing to correct this.

Thanks for your help !
