Hi Jim,

Yes, it was a type. I meant 3389. I don't think that is it either. the public address i see when i go to whatismyip is 24.44.xxx.xx and the computer I try to hit from the client side is 24.44.xxx.xx:3389. The router settings are set to forward all incoming traffic from port 3389 to 192.268.1.102. Am I missing something? Please advise. Thanks!

Jason
