OK, I need to call into another computer that is running XP Home. I have Pro. Remote desktop is a no-go, tried winVNC without luck and am now back to trying NetMeeting. For some reason, it is not allowing me to connect (or vise-versa) to the computer and I suspect it is my router.

I have a Linksys WRT54GS (the wired/wireless version) that is hard wired to my desktop comp. DSL connection, mIRC type progys run fine. I think I have the correct port open (1503), but still no luck. I really need to get hooked up to this computer to fix a software issue.

Do I need to have something set up in port triggering? I tried to goto <http://www.canyouseeme.org> to test the ports, but it can't even see port 80 with DMZ turned on!! Am I missing something?

Any Help would be...helpfull!! =)

Thanks in advance!

.
