Hi,

Is there any way to change the client ports when using remote desktop through the web interface?. I'd like to use 80 and 81 ports rather than 80 and 3389. This is basically the question, the reason to whom might it concerns, is below.

Thank you in advance.
David.

I'd like to access my home computer from my work, in my company there's a proxy cache to access the internet and a firewall. I cannot access my computer and i know the problem is in the client side since i have been able to access from my friend's computer. At my company i cannot use the remote desktop client since it simply doesn't work no matter i use port 80 rather than 3389. My only hope is through the web explorer so i'd using both 80 and 3390 ports, and here lies the problem, i'd rather use 80 and 81 to bypass the firewall.

.
