Ask your systems admin. They probably block almost all ports at their gateway.

This article may help.

How to Change Terminal Server's Listening Port

| Hi,

|

| Is there any way to change the client ports when using remote  
| desktop through the web interface?. I'd like to use 80 and 81 ports  
| rather than 80 and 3389. This is basically the question, the reason to  
| whom might it concerns, is below.

|

| Thank you in advance.

| David.

|

|

| I'd like to access my home computer from my work, in my company  
| there's a proxy cache to access the internet and a firewall. I cannot  
| access my computer and i know the problem is in the client side since  
| i have been able to access from my friend's computer. At my company i  
| cannot use the remote desktop client since it simply doesn't work no  
| matter i use port 80 rather than 3389. My only hope is through the web  
| explorer so i'd using both 80 and 3390 ports, and here lies the  
| problem, i'd rather use 80 and 81 to bypass the firewall.
