What you want to do is not possible with Remote Assistance.

Look at UltraVNC as an alternative. I find it to be quite responsive over broadband data links particularly if you disable the rendering of the remote VNC host/server PC desktop wallpaper and use the optional XP video driver on the remote VNC host/server PC.

<http://ultravnc.sourceforge.net/>

Use the included encryption plug-in if you use this over the public internet or run UltraVNC through a VPN or SSH tunnel for security. In all cases use a "strong password"...
