Sorry...forgot the first question.

It was either CISCO VPN client or AT&T VPN Client software

"Sooner Al [MVP]" wrote:

What VPN software?

Is the VPN software running on the PC when you try to connect from another PC using RDP?

Have you tried uninstalling the VPN software and test again?

The PC I am trying to remote connect to IS NOT behind any kind of router or firewall. As I mentioned, I seem to recall this starting after installing VPN software, which I use to connect to my clients networks.

If TCP Port 3389 is filtered when checked from a remote

Re: 3389 problems

location then you
more than likely have a firewall blocking the port. Is the PC
your trying
to
reach behind a firewall or router? If so you need to
forward/open TCP
Port
3389 through the firewall/router to the PCs private LAN IP.

I have had a problem remotely connecting to
my XP Prof box for some
time.
I'm not sure exactly when it started. It may
have been after
installing
some
VPN software. Anyway, when I run port
query to port 127.0.0.1, the
result
is
listening. When I run it from a remote PC, it
is filtered.

I've llooked through the article here:
<http://theillustratednetwork.mvps.org/RemoteDesktop/RemoteDesktopSetupandTroub>

But I do not see a solution. Is there a way to
re-install that
service?

Tanks
