OK, we are moving away from my original question. No the camera's do not use any web access. The Camera's are only one of multiple Security items I am using to protect the House (It is quite a system). The question is How do I access and CONTROL the Computers at Home when I am traveling? I need Access that allows me to control the Home PC. All Home Pc's are Windows XP, the Router is a BEFSR81. The Home Computers all attach to the Router. I have a Static IP, that should help!! The Remote Computers have: Laptop – Windows XP Home, Truck – Windows XP Pro. I have Looked at the links, is that all there is for help? I guess I will have to try some of the software, it looks very complicated. I was looking for an Windows XP Solution using Remote Access, the only concern I had is it will not work when I am not at Home to authorize the Access. I think your telling me to use third party software, I have a long way to go in the learning process for Remote access. Is there any Software (not necessarily free) that is a lot more user friendly (for the Secure Access Tunnel) more like a "Turnkey" solution?  
Late Model 97

Just use Remote Desktop and a \*STRONG\* password for access then...

Here is another option for accessing multiple PCs behind a firewall with Remote Desktop. No VPN required, just multiple ports open on your firewall...

Good luck...
