It could be MTU issue. This search result may help.

connection to remote computer was broken caused by network error

If the Remote Desktop screen comes up black and then you receive this error, you may need test and modify the MTU. These links may help, ...

Suddenly RDP won't connect. I'm running two machines on WinXP SP3 32-bit, and suddenly, yesterday, RDP won't connect.

I don't get any error message, RDP just blinks "Connecting to xxx.xxx.xxx.xxx" and then disappears without any error message. I've tried three different computers (all running WinXP SP3), and none of them connecting to this one specific host. These clients can connect to each other via RDP without any problem.

I've checked the event log on the problematic server, but there is no clue as to what can be the problem. I've also tried to reboot this server, but there is no improvement.

Regards

Trond Svendsen
