On many of my files and folders, the administrators group has been removed from the ACL. I'm trying to add the group back to all folders and files with the Full Control perm. I'm attempting this from the top-level folders on the root. However, the addition of the grp does not propagate to "This folder, subfolders and files" as the setting "Apply Onto" in the advanced Security drop-down implies. I've also tried taking ownership of all subfolders and files and this has not helped.
